

PRO-MAX™

Whole Egg Specialized Proteins and Direct-Fed Microbial Gel For Bovine

What?

PRO-MAX™ is a proprietary, symbiotic blend of highly concentrated whole egg specialized proteins, yeast, prebiotics and probiotics in a convenient dial-a-dose gel tube for single or multiple use.

When?

PRO-MAX™ is intended to be administered orally within 12 hours of birth and when calves are likely to be stressed. Newborn calves and calves being transported to new environments or under 7 days old can be especially vulnerable to pathogenic challenges¹.

Why?

PRO-MAX™ is designed to introduce a high concentration of whole egg specialized proteins and lactic acid creating bacteria to calves and cows prior-to and during times of stress. The “Bovine-Specific” whole egg proteins, yeast, prebiotics and probiotics used have been researched and selected to ensure maximum usability and benefits for the calf. The high concentration of probiotics provides fast-acting microbial growth which creates high amounts of lactic acid creating unfavorable conditions for enteric bacteria. Pro-active use can lead to less treatments which would keep your costs low.

Recommended Use:

Normal 5-10 cc
Stressed 10-20 cc
High Stress 20-35 cc

Packaging:

35 cc (1.1 fl oz) Sold in Case/12

Storage/Shelf Life:

Keep closed and store in a cool, dry location. Expires 180 days from date of manufacture.

Guaranteed Analysis

Crude Protein (min) 19%
Crude Fat (min) 40%
Crude Fiber (max) 3%
Lactic Acid Bacteria (min) 24 billion CFU/10 cc
And Yeast (*Enterococcus faecium*, *Saccharomyces cerevisiae*)

Not intended to diagnose, treat, cure or prevent any disease.
